Education

Maharana Institute of Professional Studies	Kanpur
Bachelor of Technology - Computer Science and Engineering (AI/ML)	2024-2028
GPA: 8	

Experience

Software Developer Intern (Python)	May 2026– Present
GPSLab Private Limited, Kanpur	
• Built AI-powered Smart Albums for automatic photo organization and search. • Developed intelligent camera recording systems with person detection and event-based recording. • Designed and optimized backend APIs using FastAPI and Django. • Integrated ML models into scalable production workflows.	
Machine Learning Workshop – Softpro India (In collaboration with AKTU, Lucknow) [Link]	November 2025
• Learned core ML fundamentals including model building, data preprocessing & data wrangling techniques. • Gained hands-on experience with NumPy, Pandas, and Matplotlib for data analysis and visualization. • Worked on real datasets to understand feature engineering, performance evaluation, and workflow pipelines.	

Projects

VectorDB- From Scratch	April 2026
• Description: A custom-built vector database and RAG pipeline featuring HNSW and KD-Tree search algorithms for local, privacy-focused semantic document retrieval. • Role: Engineered a high-performance search engine and integrated local LLMs to enable real-time vector indexing and interactive AI-driven data chat. • Technologies Used: Python, FastAPI, Faiss (HNSW implementation), NumPy, Ollama (Llama 3.2), Scikit-learn (PCA), and LangChain.	
The AI Legal for India [Link]	February 2026
• Description: Built a privacy-first AI-powered contract analyzer that detects illegal and predatory clauses under the Indian Contract Act, 1872, and explains risks in simple language. • Role: Developed an AI risk analysis system using RAG and Gemini API with a privacy-first serverless architecture. • Technologies Used: Next.js 14, TypeScript, Gemini API, RAG, Prisma, SQLite, Tailwind.	
AI Coffee Shop Barista Agent [Link]	November 2025
• Description: Built a barista agent that maintains order state via conversation and generates structured JSON orders in real time. • Role: Backend & Voice Interaction Developer • Technologies Used: Gemini 2.5 Flash, LiveKit, Murf Falcon, Deepgram, JSON, Python	

Certification [\[Link\]](#)

Oracle Cloud Infrastructure 2025 Certified AI Foundation Associate [\[Link\]](#)

October [2025-2027]

- **Description:** Validated foundational knowledge of AI/ML concepts.
- **Technologies Used:** OCI, AI/ML Fundamentals, Cloud Services, Model Deployment Basics

Introduction to Machine Learning [\[Link\]](#)

- **Description:** NPTEL-certified course covering core machine learning concepts.
- **Technologies Used:** Machine Learning, Python, Data Analysis

April 2026

Additional

Technical Skills: Python, DSA, Docker, Kubernetes, CI/CD, Cloud, Linux, RAG, Django, AI/ML, SQL, Prompt Engineering, Vibe Coding, GitHub.

Coding Profiles: 5★ in Problem Solving on HackerRank
Solved 200+ problems in LeetCode

Academic Achievements : HACKSHODH - CSJM Hackathon[\[Link\]](#)

Completed challenges in **Google Arcade Program**

Won swags in the "Quiz Mania" event during the College DevFest,

Ranked 148 in the NST Junior Coding Olympiad by Newton School of Technology

Volunteer Experience: Participated in multiple college-level tech events and workshops.
